DETAILED ACTION

Response to Amendment

This Office Action is in response to Applicants' After Final filed on August 5, 2004. Claims 1-24 are presented for further examination.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Lechleider.

As per claim 1, Lechleider discloses a server for transmitting data over a network to client having a de-jitter buffer, the server comprising:

- a regular path for transmitting data received from a source at a regular rate (col. 2, lines 21-41 and col. 4, lines 12-19);
- a burst path for transmitting data received from the source at a burst rate higher than the regular rate (col. 2, lines 21-41, col. 4, lines 12-19 and lines 62-67);
- an initial burst transmit buffer in the burst path for buffering data from the source and for transmitting the buffered data to the client at the burst rate (col. 2, lines 21-41, col. 4, lines 12-19 and lines 62-67); and

Art Unit: 2157

- a switch for selecting to transmit data from one of the regular path and the initial burst path (col. 4, lines 41-58).

As per claim 2, Lechleider discloses:

- a control unit for switching the switch (col. 4, lines 41-58).

As per claim 3, Lechleider discloses:

- a monitor that measures an amount of the data is output through the burst path, and wherein the control unit switches the switch when a preset measure of the data is output through the burst path (col. 8, lines 51-67 and col. 8, lines 1-17).

As per claim 4, Lechleider further discloses:

- a network bandwidth monitor (col. 8, lines 51-65); and
- a controller that controls a fill level of the initial burst transmit buffer according to the monitored bandwidth (col. 4, lines 41-58 and col. 8, lines 1-17).

As per claim 5, Lechleider discloses:

- a transcoder for transcoding the buffered streaming media output through the burst path (col. 9, lines 42-53).

As per claim 6, Lechleider discloses:

- a network bandwidth monitor (col. 8, lines 51-65); and
- a transcoder for transcoding the buffered streaming media output through the burst path if the monitored bandwidth becomes less than a preset bandwidth (col. 8, lines 1-17 and col. 9, lines 42-53).

As per claim 7, Lechleider discloses:

Art Unit: 2157

- a receiving de-jitter buffer for receiving and playing out the streaming media, wherein the receiving de-jitter buffer has a changing fill level having a first threshold that initiates playout of the streaming media and that changes while playing out the streaming media to a second higher threshold (col. 9, lines 42-53 and col. 10, lines 3-13).

As per claim 8, Lechleider discloses:

- wherein the fill is increased gradually (col. 9, lines 18-37).

As per claims 9 and 15, Lechleider discloses a method for a server for retransmitting streaming media to a network comprising:

- means for receiving a first portion of the streaming media along a first path (col. 2, lines 21-41, col. 4, lines 12-19 and col. 9, lines 6-37);
- means for outputting the first portion to the network through the first path at a first rate (col. 2, lines 21-41, col. 4, lines 12-19 and col. 9, lines 6-37);
- means for receiving a second portion of the streaming media from the source along a second path distinct from the first path at least in part (col. 2, lines 21-41, col. 4, lines 12-19 and lines 42-64); and
- means for transmitting the second portion to the network through the second path at a second rate lower than the first rate (col. 2, lines 21-41, col. 4, lines 12-19 and lines 42-64).

As per claims 10 and 16, Lechleider discloses:

- means for switching to outputting from the second path, from outputting from the first path (col. 4, lines 41-58).

Art Unit: 2157

As per claims **11**, Lechleider discloses:

- means for storing the first portion (col. 8, lines 19-29).

As per claims **12** and **18**, Lechleider discloses:

- means for monitoring a bandwidth of the network (col. 8, lines 51-65); and
- means for controlling a size of the first portion according to the monitored bandwidth (col. 8, lines 1-17 and col. 9, lines 42-53).

As per claims **13** and **19**, Lechleider discloses:

- means for transcoding the first portion (col. 8, lines 19-29).

As per claims **14** and **20**, Lechleider discloses:

- means for monitoring a bandwidth of the network (col. 8, lines 51-65); and
- means for transcoding the first portion if the monitored bandwidth becomes less than a preset bandwidth (col. 8, lines 1-17 and col. 9, lines 42-53).

As per claim **17**, Lechleider discloses:

- storing the first portion in an initial burst transmit buffer (col. 8, lines 19-29).

As per claims **21** and **22**, Lechleider discloses a method for a client to receive streaming media over a network, comprising:

- means for receiving data having the streaming encoded therein (col. 9, lines 42-53 and col. 10, lines 3-13).
- means for storing the received data in a de-jitter buffer thereby increasing a fullness of the buffer (col. 9, lines 42-53 and col. 10, lines 3-13);
- means for initiating play out of the stored data from the de-jitter buffer when the fullness reaches a fill level (col. 9, lines 42-53 and col. 10, lines 3-13); and

Art Unit: 2157

- means for changing the fill level while playing out the stored data (col. 9, lines 42-53 and col. 10, lines 3-13).

As per claim 23, Lechleider discloses:

- wherein the fill is increased gradually (col. 9, lines 18-37).

As per claim 24, Lechleider discloses:

- play out is initiated before the fullness has reached a final level (col. 9, lines 42-53 and col. 10, lines 3-13).
